Summary

Web Developer with 10+ years of experience building high-converting marketing platforms and implementing technical infrastructure for lead generation, affiliate tracking, and CRO initiatives. Proven track record optimizing web properties that drive measurable business outcomes through performance improvements, A/B testing, and behavioral analytics. Delivered conversion rate improvements of 32% and reduced page load times by 28% across enterprise healthcare and fintech platforms requiring compliance-aware implementations.

Skills

Frontend

HTML5, CSS3, JavaScript (ES6+), PHP, WordPress, Responsive Design, Mobile-First Development, Schema Markup

Backend

REST APIs, Webhooks, Server-Side Tracking, Custom WordPress Plugins, Database Optimization, Caching Strategies, API Authentication

Tools

Google Tag Manager, GA4, Google Looker Studio, VWO, Google Optimize, Hotjar, Microsoft Clarity, Git Version Control

Cloud

CDN Configuration, Web Hosting Optimization, DNS Management, SSL/TLS Implementation, Cloudflare, Performance Monitoring

Data

Salesforce CRM, Web-to-Lead Integration, UTM Parameter Management, Conversion Attribution, Behavioral Analytics, Lead Scoring, BigQuery

Industry

Affiliate Pixel Tracking, Postback URLs, Conversion Rate Optimization, A/B Testing, Multivariate Testing, Landing Page Optimization, Healthcare Compliance, HIPAA-Compliant Tracking, Form Optimization, Lead Generation

Integration Platforms

Zapier, n8n, Intercom, Drift, Twilio SMS, Webhook Management, Chat Platform Configuration, Marketing Automation

Experience

Epic Systems

10/2023 – Present

Web Developer

- Architected and deployed WordPress-based web properties supporting clinical provider lead generation, improving conversion rates by 32% through systematic CRO implementation across landing pages and web forms.
- Implemented Google Tag Manager infrastructure managing 47 tags across patient-facing and provider-facing websites, ensuring accurate GA4 tracking, affiliate pixel implementation, and HIPAA-compliant behavioral analytics.

- Engineered A/B testing framework using VWO across high-traffic landing pages generating 180,000 monthly visitors, systematically testing form layouts, call-to-action placement, and mobile responsiveness to drive 19% lift in form completions.
- Established daily monitoring dashboards in Google Looker Studio tracking site uptime, Core Web Vitals, and conversion performance by page, reducing incident response time by 41 minutes through automated alerting workflows.
- Deployed Intercom chatbot across web properties with custom conversation flows capturing provider inquiries, implementing routing logic and Salesforce integration that converted 23% of chat sessions into qualified leads.
- Optimized page speed and Core Web Vitals across WordPress instances through lazy loading, image compression, and caching strategies, reducing average page load time from 4.3s to 1.8s and improving mobile responsiveness scores by 34 points.
- Integrated Hotjar behavioral analytics platform to identify friction points in multi-step forms, translating session recordings and heatmap data into 12 testable hypotheses that improved form abandonment rates by 27%.
- Managed affiliate tracking infrastructure for healthcare lead generation partners, implementing postback URLs, UTM parameter management, and cross-platform attribution logic ensuring accurate lead routing and revenue reconciliation.
- Developed custom PHP scripts and REST API integrations connecting web form submissions to Salesforce CRM with proper field mapping, duplicate detection, and lead scoring automation reducing manual data entry by 89%.

Optum

01/2020 – 09/2023

Web Developer

- Built comparison site infrastructure in WordPress supporting healthcare insurance product marketing across 14 states, implementing schema markup, semantic HTML, and mobile-first responsive design that improved organic traffic by 68%.
- Designed multivariate testing program using Google Optimize across landing pages generating 240,000 monthly sessions, systematically evaluating headline variations, hero images, and form field configurations resulting in 29% conversion improvement.
- Implemented affiliate pixel tracking for insurance lead aggregators including postback configuration, server-side validation, and discrepancy monitoring workflows that reduced attribution gaps from 11% to under 2%.
- Deployed Microsoft Clarity across web properties analyzing 890,000 user sessions, identifying rage clicks and session replay patterns that informed 18 UX optimizations reducing bounce rates by 22 percentage points.
- Established Salesforce web-to-lead integration architecture with custom field mapping, validation logic, and error handling ensuring 99.7% successful form submission routing across HIPAA-compliant healthcare marketing funnels.
- Configured Drift live chat platform with conditional routing rules and lead qualification workflows, integrating webhook delivery to Salesforce and achieving 31% conversion rate from chat interactions to sales opportunities.
- Automated landing page deployment workflows using Git version control and staging environments, enabling PPC team to launch campaign-specific pages within 4 hours while maintaining code quality and brand consistency.

PayPal

07/2015 – 12/2019

Web Developer

- Developed high-converting checkout landing pages for global payment campaigns using HTML, CSS, JavaScript, and PHP supporting 3.2 million monthly transactions across 19 countries with localized content and currency handling.
- Implemented Google Tag Manager tracking architecture for eCommerce conversion funnels, configuring GA4 enhanced eCommerce events, affiliate pixel tracking, and custom dimension parameters ensuring accurate attribution across payment flows.
- Launched A/B testing initiatives using VWO across payment authorization pages, systematically testing button copy, trust badge placement, and error messaging resulting in 18% reduction in checkout abandonment rates.

- Integrated Twilio SMS verification tools into account registration and transaction confirmation workflows, building REST API connections with webhook handling and retry logic achieving 99.4% message delivery reliability.
- Optimized WordPress-based merchant onboarding portals through performance auditing, database query optimization, and CDN implementation reducing page load times by 28% and improving mobile conversion rates by 21%.

Education

San Francisco State University

Bachelor of Engineering, Computer Science | 05/2015
